

Guidelines for e-token

It has been observed that various new e-tokens of different makes are being introduced in Indian market.

These e-tokens all use different drivers and methodology. It has also been observed that some tokens do not work if both signing and encryption certificates are installed in them. Please note that as per CVC and CCA guidelines the Nextenders e-procurement application requires both the certificates at different stages in the workflow.

We support all leading e-tokens in our application. Any untested or new token may not work properly. We recommend end users to consult with our local representative at their respective locations before procuring new e-tokens. The following e-tokens with their current drivers are tested and working fine on the Single eProcurement system i.e. <https://haryanaeprocurement.gov.in>:

1. Bit4id
2. Aladdin
3. Vasco
4. Starkey
5. E-pass-2003
6. Safenet-2032
7. WD Proxkey Grey / SPC Token
8. Trustkey(TKC) 163c 418

NOTE: -

1. Revoked certificate will not be worked on this e-procurement application.
2. Based upon the recent analysis/feedback it has been observed that the Users are facing problem while mapping the below e-Token containing their Digital Signature Certificate respectively at <https://haryanaeprocurement.gov.in>:
 - (i) WD Proxkey (Except **Grey/SPC token**)
 - (ii) Trustkey (Except **TKC 163c418**)
 - (iii) Gemalto
